DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Verschueren US Patent 5612285.

Regarding claim 1, Verschueren discloses a high pressure discharge lamp comprising: a discharge vessel which is enveloped with clearance by an outer bulb provided with a lamp cap, which outer bulb is translucent, characterized in that the outer bulb is substantially tubular in shape (for example, see elements 3,1,2, Fig 1).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Verschueren US Patent 5612285 in view of Kinczel et al US Patent 5004948.

Regarding claim 2, Verschueren discloses the instant claimed invention except that the outer bulb is provided with a light-scattering layer.

Application/Control Number: 09/873,564

Art Unit: 2841

Kinczel et al US Patent 5004948 discloses a discharge lamp wherein the outer bulb is provided with a light-scattering layer (for example, see element 2, Fig 5, see column 7, lines 67-68)

Accordingly, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have provided a light-scattering layer on the outer bulb as taught by Kinczel et al the discharge lamp assembly of Verschueren for the purpose of improving the UV efficiency of the discharge lamp (cited by Kinczel et al column 4, lines 52-62).

Regarding claim 3, forming an electrostatic coating by using a light scattering layer is a known process in the art (cited by Kinczel et al column 8, lines 13-15).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Dameon É Levi whose telephone number is (703) 305-0426. The examiner can normally be reached on Mon.-Fri. (9:00 - 5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David S Martin can be reached on (703) 308-3121. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 308-7724 for regular communications and (703) 308-7724 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0058.
